

## STRETCHING MACHINE LANA ST

The LANA ST stretching machine is suitable for stretching (dry and damp) every type of wild fur, obtaining best gain in size (10 – 15 %) and more highly softness of the leather.

The furs pass through a rolling train of 6 pairs of rubber rollers, at which the pressure of the upper onto the lower rollers may be adjusted through springs in a careful and elastic way.

Scales on the left and right side clearly indicate the adjusted stretching pressure for an easy control. Of course it is possible, to stretch fur skins broad wise as well. This construction allows simple and safe operation with a high output capacity.

Capacity: approx. 300 – 400 mink skins per hour

Technical data:

LANA ST

Working widths: 60 cms / 80 cms / 100 cms / 120 cms / 140 cms

Dimensions of machine:

LANA ST 60 / 140

width: 100 cms / 180 cms  
depth: 80 cms / 80 cms  
height: 105 cms / 105 cms  
weight: approx. 200 kgs / 470 kgs

Connected load: approx: 0,5 kW, 400 volts, 3 phase
